Bedestrian is an innovative autonomous electric vehicle and operating system designed for the delivery of goods. The system can operate in buildings and outdoors. The INFOBOTICS™ platform includes positioning, navigation control, machine vision, facial recognition and natural language processing to ensure safe and efficient operations.

Their unique software-hardware integration is currently aimed at hospitals and elder care facilities to deliver medical supplies and pharmaceuticals. It interacts with staff and patients to enhance the hospital experience. This frees up trained staff to focus on patient care.

KEY ACCOMPLISHMENTS

- Operating pilots at a local hospital and an elderly care facility network.
- Rapidly responded to customer needs due to the COVID-19 pandemic to modify vehicles for: 1) contactless delivery, 2) modular trailers for increased payloads, fully capable camera, display, 3) voice interaction for enhance telemedicine, and 4) air-tight compartment sealing and UV disinfecting.
- Responded to customer request for new product consisting of a stationary patient communication and monitoring system.

"SBDC has been extremely helpful, particularly with pandemic-related loan and grant program advice and support, and with building critical network connections with manufacturing and strategic partners for R&D and customer development."

Shadi Mere, CEO Bedestrian
